

tf.approx_top_k Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/approx_top_k

Returns min/max k values and their indices of the input operand in an approximate manner.

Function Signatures

```
tf.approx_top_k( input: Annotated[Any, TV_ApproxTopK_T], k:
int, reduction_dimension: int = -1, recall_target: float =
0.95, is_max_k: bool = True, reduction_input_size_override:
int = -1, aggregate_to_topk: bool = True, name=None )
```

Code Examples

```
tf.approx_top_k(  
    input: Annotated[Any, TV_ApproxTopK_T],  
    k: int,  
    reduction_dimension: int = -1,  
    recall_target: float = 0.95,  
    is_max_k: bool = True,  
    reduction_input_size_override: int = -1,  
    aggregate_to_topk: bool = True,  
    name=None  
)
```

```
tf.approx_top_k(  
    input: Annotated[Any, TV_ApproxTopK_T],  
    k: int,  
    reduction_dimension: int = -1,  
    recall_target: float = 0.95,  
    is_max_k: bool = True,  
    reduction_input_size_override: int = -1,  
    aggregate_to_topk: bool = True,  
    name=None  
)
```

Documentation

Returns min/max k values and their indices of the input operand in an approximate manner.
