https://www.tensorflow.org/api_docs/python/tf/audio/encode_wav

Encode audio data using the WAV file format.

Function Signatures

```
tf.audio.encode_wav( audio: Annotated[Any, _atypes.Float32],  
sample_rate: Annotated[Any, _atypes.Int32], name=None ) ->  
Annotated[Any, _atypes.String]
```

Code Examples

```
tf.audio.encode_wav(  
audio: Annotated[Any, _atypes.Float32],  
sample_rate: Annotated[Any, _atypes.Int32],  
name=None  
) -> Annotated[Any, _atypes.String]
```

```
tf.audio.encode_wav(  
audio: Annotated[Any, _atypes.Float32],  
sample_rate: Annotated[Any, _atypes.Int32],  
name=None  
) -> Annotated[Any, _atypes.String]
```

`tf.compat.v1.audio.encode_wav`

This operation will generate a string suitable to be saved out to create a .wav audio file. It will be encoded in the 16-bit PCM format. It takes in float values in the range -1.0f to 1.0f, and any outside that value will be clamped to that range.

`audio` is a 2-D float Tensor of shape `[length, channels]`.

`sample_rate` is a scalar Tensor holding the rate to use (e.g. 44100).
