`bitwise_and(...)`

`bitwise_or(...)`

Documentation

Public API for `tf._api.v2.bitwise` namespace

Functions

`bitwise_and(...)`: Elementwise computes the bitwise AND of x and y.

`bitwise_or(...)`: Elementwise computes the bitwise OR of x and y.

`bitwise_xor(...)`: Elementwise computes the bitwise XOR of x and y.

`invert(...)`: Invert (flip) each bit of supported types; for example, type `uint8` value `01010101` becomes `10101010`.

`left_shift(...)`: Elementwise computes the bitwise left-shift of x and y.

`right_shift(...)`: Elementwise computes the bitwise right-shift of x and y.
