Public API for `tf._api.v2.config` namespace

Documentation

Public API for `tf._api.v2.config` namespace

Modules

experimental module: Public API for `tf._api.v2.config.experimental` namespace

optimizer module: Public API for `tf._api.v2.config.optimizer` namespace

threading module: Public API for `tf._api.v2.config.threading` namespace

Classes

class `LogicalDevice`: Abstraction for a logical device initialized by the runtime.

class `LogicalDeviceConfiguration`: Configuration class for a logical devices.

class `PhysicalDevice`: Abstraction for a locally visible physical device.

Functions

`experimental_connect_to_cluster(...)`: Connects to the given cluster.

`experimental_connect_to_host(...)`: Connects to a single machine to enable remote execution on it.

`experimental_functions_run_eagerly(...)`: Returns the value of the `experimental_run_functions_eagerly` setting. (deprecated)

`experimental_run_functions_eagerly(...)`: Enables / disables eager execution of `tf.functions`. (deprecated)

`functions_run_eagerly(...)`: Returns the value of the `run_functions_eagerly` setting.

`get_logical_device_configuration(...)`: Get the virtual device configuration for a `tf.config.PhysicalDevice`.

`get_soft_device_placement(...)`: Return status of soft device placement flag.

`get_visible_devices(...)`: Get the list of visible physical devices.

`list_logical_devices(...)`: Return a list of logical devices created by runtime.

`list_physical_devices(...)`: Return a list of physical devices visible to the host runtime.

`run_functions_eagerly(...)`: Enables / disables eager execution of `tf.functions`.

`set_logical_device_configuration(...)`: Set the logical device configuration for a `tf.config.PhysicalDevice`.

`set_soft_device_placement(...)`: Enable or disable soft device placement.

`set_visible_devices(...)`: Set the list of visible devices.
