https://www.tensorflow.org/api_docs/python/tf/compat/v1/config/experimental

Public API for tf._api.v2.config.experimental namespace

Function Signatures

```
disable_mlir_bridge(...)  
enable_mlir_bridge(...)  
enable_tensor_float_32_execution(...)
```

Documentation

Public API for tf._api.v2.config.experimental namespace

Classes

class ClusterDeviceFilters: Represent a collection of device filters for the remote workers in cluster.

class VirtualDeviceConfiguration: Configuration class for a logical devices.

Functions

`disable_mlir_bridge(...)`: Disables experimental MLIR-Based TensorFlow Compiler Bridge.

`enable_mlir_bridge(...)`: Enables experimental MLIR-Based TensorFlow Compiler Bridge.

`enable_tensor_float_32_execution(...)`: Enable or disable the use of TensorFloat-32 on supported hardware.

`get_device_details(...)`: Returns details about a physical devices.

`get_device_policy(...)`: Gets the current device policy.

`get_memory_growth(...)`: Get if memory growth is enabled for a `PhysicalDevice`.

`get_memory_info(...)`: Get memory info for the chosen device, as a dict.

`get_memory_usage(...)`: Get the current memory usage, in bytes, for the chosen device. (deprecated)

`get_synchronous_execution(...)`: Gets whether operations are executed synchronously or asynchronously.

`get_virtual_device_configuration(...)`: Get the virtual device configuration for a `tf.config.PhysicalDevice`.

`get_visible_devices(...)`: Get the list of visible physical devices.

`list_logical_devices(...)`: Return a list of logical devices created by runtime.

`list_physical_devices(...)`: Return a list of physical devices visible to the host runtime.

`reset_memory_stats(...)`: Resets the tracked memory stats for the chosen device.

`set_device_policy(...)`: Sets the current thread device policy.

`set_memory_growth(...)`: Set if memory growth should be enabled for a `PhysicalDevice`.

`set_synchronous_execution(...)`: Specifies whether operations are executed synchronously or asynchronously.

`set_virtual_device_configuration(...)`: Set the logical device configuration for a `tf.config.PhysicalDevice`.

`set_visible_devices(...)`: Set the list of visible devices.

`tensor_float_32_execution_enabled(...)`: Returns whether `TensorFloat-32` is enabled.
