https://www.tensorflow.org/api_docs/python/tf/compat/v1/data/make_one_shot_iterator

Creates an iterator for elements of dataset.

Function Signatures

```
tf.compat.v1.data.make_one_shot_iterator( dataset:
tf.compat.v1.data.Dataset ) -> Union[iterator_ops.Iterator,
iterator_ops.OwnedIterator]
iterator = iter(dataset)
```

Code Examples

```
tf.compat.v1.data.make_one_shot_iterator(  
dataset: tf.compat.v1.data.Dataset  
) -> Union[iterator_ops.Iterator, iterator_ops.OwnedIterator]
```

```
tf.compat.v1.data.make_one_shot_iterator(  
dataset: tf.compat.v1.data.Dataset  
) -> Union[iterator_ops.Iterator, iterator_ops.OwnedIterator]
```

```
tf.compat.v1.data.Dataset
```

Documentation

Creates an iterator for elements of dataset.

Migrate to TF2

This is a legacy API for consuming dataset elements and should only be used during transition from TF 1 to TF 2. Note that using this API should be a transient state of your code base as there are in general no guarantees about the interoperability of TF 1 and TF 2 code.

In TF 2 datasets are Python iterables which means you can consume their elements using for elem in dataset: ... or by explicitly creating iterator via `iterator = iter(dataset)` and fetching its elements via `values = next(iterator)`.

Description

Used in the notebooks

- Exploring the TF-Hub CORD-19 Swivel Embeddings
- Graph-based Neural Structured Learning in TFX
- Preprocessing data with TensorFlow Transform
