https://www.tensorflow.org/api_docs/python/tf/compat/v1/enable_v2_behavior

Enables TensorFlow 2.x behaviors.

Function Signatures

```
tf.compat.v1.enable_v2_behavior()
```

Code Examples

```
tf.compat.v1.enable_v2_behavior()
```

```
tf.compat.v1.enable_v2_behavior()
```

Documentation

Enables TensorFlow 2.x behaviors.

Migrate to TF2

This function is not necessary if you are using TF2. V2 behavior is enabled by default.

Description

Used in the notebooks

- Pandas DataFrame to Fairness Indicators Case Study
- Migrating tf.summary usage to TF 2.x

This function can be called at the beginning of the program (before Tensors, Graphs or other structures have been created, and before devices have been initialized. It switches all global behaviors that are different between TensorFlow 1.x and 2.x to behave as intended for 2.x.

This function is called in the main TensorFlow `__init__.py` file, user should not need to call it, except during complex migrations.
