https://www.tensorflow.org/api_docs/python/tf/compat/v1/feature_column

Public API for `tf._api.v2.feature_column` namespace

Function Signatures

```
bucketized_column(...)  
categorical_column_with_hash_bucket(...)  
categorical_column_with_identity(...)
```

Documentation

Public API for `tf._api.v2.feature_column` namespace

Functions

`bucketized_column(...)`: Represents discretized dense input bucketed by boundaries. (deprecated)

`categorical_column_with_hash_bucket(...)`: Represents sparse feature where ids are set by hashing. (deprecated)

`categorical_column_with_identity(...)`: A `CategoricalColumn` that returns identity values. (deprecated)

`categorical_column_with_vocabulary_file(...)`: A `CategoricalColumn` with a vocabulary file. (deprecated)

`categorical_column_with_vocabulary_list(...)`: A `CategoricalColumn` with in-memory vocabulary. (deprecated)

`crossed_column(...)`: Returns a column for performing crosses of categorical features. (deprecated)

`embedding_column(...)`: `DenseColumn` that converts from sparse, categorical input. (deprecated)

`indicator_column(...)`: Represents multi-hot representation of given categorical column. (deprecated)

`input_layer(...)`: Returns a dense `Tensor` as input layer based on given `feature_columns`. (deprecated)

`linear_model(...)`: Returns a linear prediction `Tensor` based on given `feature_columns`. (deprecated)

`make_parse_example_spec(...)`: Creates parsing spec dictionary from input `feature_columns`. (deprecated)

`numeric_column(...)`: Represents real valued or numerical features. (deprecated)

`sequence_categorical_column_with_hash_bucket(...)`: A sequence of categorical terms where ids are set by hashing. (deprecated)

`sequence_categorical_column_with_identity(...)`: Returns a feature column that represents sequences of integers. (deprecated)

`sequence_categorical_column_with_vocabulary_file(...)`: A sequence of categorical terms where ids use a vocabulary file. (deprecated)

`sequence_categorical_column_with_vocabulary_list(...)`: A sequence of

categorical terms where ids use an in-memory list. (deprecated)

sequence_numeric_column(...): Returns a feature column that represents sequences of numeric data. (deprecated)

shared_embedding_columns(...): List of dense columns that convert from sparse, categorical input. (deprecated)

weighted_categorical_column(...): Applies weight values to a CategoricalColumn. (deprecated)
