https://www.tensorflow.org/api_docs/python/tf/compat/v1/fixed_size_partitioner

Partitioner to specify a fixed number of shards along given axis.

Function Signatures

```
tf.compat.v1.fixed_size_partitioner( num_shards, axis=0 )  
x = tf.compat.v1.get_variable( "x", shape=(2,),  
partitioner=tf.compat.v1.fixed_size_partitioner(2) )
```

Code Examples

```
tf.compat.v1.fixed_size_partitioner(  
num_shards, axis=0  
)
```

```
tf.compat.v1.fixed_size_partitioner(  
num_shards, axis=0  
)
```

```
x = tf.compat.v1.get_variable(  
    "x", shape=(2,), partitioner=tf.compat.v1.fixed_size_partitioner(2)  
)
```

```
x = tf.compat.v1.get_variable(  
    "x", shape=(2,), partitioner=tf.compat.v1.fixed_size_partitioner(2)  
)
```

```
partitioner = (  
    tf.distribute.experimental.partitioners.FixedShardsPartitioner(  
        num_shards=2)  
    )  
strategy = tf.distribute.experimental.ParameterServerStrategy(  
    cluster_resolver=cluster_resolver,  
    variable_partitioner=partitioner)  
with strategy.scope():  
    x = tf.Variable([1.0, 2.0])
```

```
partitioner = (  
    tf.distribute.experimental.partitioners.FixedShardsPartitioner(  
        num_shards=2)  
    )  
strategy = tf.distribute.experimental.ParameterServerStrategy(  
    cluster_resolver=cluster_resolver,  
    variable_partitioner=partitioner)  
with strategy.scope():  
    x = tf.Variable([1.0, 2.0])
```

Documentation

Partitioner to specify a fixed number of shards along given axis.

Migrate to TF2

This API is deprecated in TF2. In TF2, partitioner is no longer part of the variable declaration via `tf.Variable`.

ParameterServer Training

handles partitioning of variables. The corresponding TF2 partitioner class of `fixed_size_partitioner` is `tf.distribute.experimental.partitioners.FixedShardsPartitioner`.

Check the migration guide

on the differences in treatment of variables and losses between TF1 and TF2.
