https://www.tensorflow.org/api_docs/python/tf/compat/v1/flags/DEFINE

Registers a generic Flag object.

Function Signatures

```
tf.compat.v1.flags.DEFINE( parser, name, default, help,  
    flag_values=_flagvalues.FLAGS, serializer=None,  
    module_name=None, required=False, **args )
```

Code Examples

```
tf.compat.v1.flags.DEFINE(  
    parser,  
    name,  
    default,  
    help,  
    flag_values=_flagvalues.FLAGS,  
    serializer=None,  
    module_name=None,  
    required=False,  
    **args  
)
```

```
tf.compat.v1.flags.DEFINE(  
    parser,  
    name,  
    default,  
    help,  
    flag_values=_flagvalues.FLAGS,  
    serializer=None,  
    module_name=None,  
    required=False,  
    **args  
)
```

Documentation

Registers a generic Flag object.

Auxiliary function: clients should use the specialized `DEFINE_` function instead.

Returns
