https://www.tensorflow.org/api_docs/python/tf/compat/v1/flags/DEFINE_multi_enum_class

Registers a flag whose value can be a list of enum members.

Function Signatures

```
tf.compat.v1.flags.DEFINE_multi_enum_class( name, default,
enum_class, help, flag_values=_flagvalues.FLAGS,
module_name=None, case_sensitive=False, required=False,
**args )
```

Code Examples

```
tf.compat.v1.flags.DEFINE_multi_enum_class(  
    name,  
    default,  
    enum_class,  
    help,  
    flag_values=_flagvalues.FLAGS,  
    module_name=None,  
    case_sensitive=False,  
    required=False,  
    **args  
)
```

```
tf.compat.v1.flags.DEFINE_multi_enum_class(  
    name,  
    default,  
    enum_class,  
    help,  
    flag_values=_flagvalues.FLAGS,  
    module_name=None,  
    case_sensitive=False,  
    required=False,  
    **args  
)
```

Documentation

Registers a flag whose value can be a list of enum members.

Use the flag on the command line multiple times to place multiple enum values into the list.

Returns
