https://www.tensorflow.org/api_docs/python/tf/compat/v1/flags/EnumParser

Parser of a string enum value (a string value from a given set).

Function Signatures

```
tf.compat.v1.flags.EnumParser( enum_values: Iterable[Text],  
case_sensitive: bool = True ) -> None
```

Code Examples

```
tf.compat.v1.flags.EnumParser(  
  enum_values: Iterable[Text], case_sensitive: bool = True  
) -> None
```

```
tf.compat.v1.flags.EnumParser(  
  enum_values: Iterable[Text], case_sensitive: bool = True  
) -> None
```

```
flag_type() -> Text
```

```
flag_type() -> Text
```

```
parse(  
  argument: Text  
) -> Text
```

```
parse(  
  argument: Text  
) -> Text
```

Documentation

Parser of a string enum value (a string value from a given set).

Inherits From: `ArgumentParser`

Raises

`## Methods`

`flag_type`

See base class.

Determines validity of argument and returns the correct element of enum.
