https://www.tensorflow.org/api_docs/python/tf/compat/v1/flags/disclaim_key_flags

Declares that the current module will not define any more key flags.

Function Signatures

```
tf.compat.v1.flags.disclaim_key_flags() -> None
```

Code Examples

```
tf.compat.v1.flags.disclaim_key_flags() -> None
```

```
tf.compat.v1.flags.disclaim_key_flags() -> None
```

Documentation

Declares that the current module will not define any more key flags.

Normally, the module that calls the `DEFINE_xxx` functions claims the flag to be its key flag. This is undesirable for modules that define additional `DEFINE_yyy` functions with its own flag parsers and serializers, since that module will accidentally claim flags defined by `DEFINE_yyy` as its key flags. After calling this function, the module disclaims flag definitions thereafter, so the key flags will be correctly attributed to the caller of `DEFINE_yyy`.

After calling this function, the module will not be able to define any more flags. This function will affect all `FlagValues` objects.
