https://www.tensorflow.org/api_docs/python/tf/compat/v1/flags/mark_flags_as_required

Ensures that flags are not None during program execution.

Function Signatures

```
tf.compat.v1.flags.mark_flags_as_required( flag_names,
flag_values=_flagvalues.FLAGS )
if __name__ == '__main__':
flags.mark_flags_as_required(['flag1', 'flag2', 'flag3'])
app.run()
```

Code Examples

```
tf.compat.v1.flags.mark_flags_as_required(  
    flag_names, flag_values=_flagvalues.FLAGS  
)
```

```
tf.compat.v1.flags.mark_flags_as_required(  
    flag_names, flag_values=_flagvalues.FLAGS  
)
```

```
if __name__ == '__main__':  
    flags.mark_flags_as_required(['flag1', 'flag2', 'flag3'])  
    app.run()
```

```
if __name__ == '__main__':  
    flags.mark_flags_as_required(['flag1', 'flag2', 'flag3'])  
    app.run()
```

Documentation

Ensures that flags are not None during program execution.

If your module might be imported by others, and you only wish to make the flag required when the module is directly executed, call this method like this::

Raises
