https://www.tensorflow.org/api_docs/python/tf/compat/v1/get_session_tensor

Get the tensor of type dtype by feeding a tensor handle.

Function Signatures

```
tf.compat.v1.get_session_tensor( handle, dtype, name=None )
```

Code Examples

```
tf.compat.v1.get_session_tensor(  
    handle, dtype, name=None  
)
```

```
tf.compat.v1.get_session_tensor(  
    handle, dtype, name=None  
)
```

```
c = tf.multiply(a, b)  
h = tf.compat.v1.get_session_handle(c)  
h = sess.run(h)  
p, a = tf.compat.v1.get_session_tensor(h.handle, tf.float32)  
b = tf.multiply(a, 10)  
c = sess.run(b, feed_dict={p: h.handle})
```

```
c = tf.multiply(a, b)  
h = tf.compat.v1.get_session_handle(c)  
h = sess.run(h)  
p, a = tf.compat.v1.get_session_tensor(h.handle, tf.float32)  
b = tf.multiply(a, 10)  
c = sess.run(b, feed_dict={p: h.handle})
```

Documentation

Get the tensor of type dtype by feeding a tensor handle.

This is EXPERIMENTAL and subject to change.

Get the value of the tensor from a tensor handle. The tensor is produced in a previous run() and stored in the state of the session.

Returns

Example:
