https://www.tensorflow.org/api_docs/python/tf/compat/v1/graph_util/remove_training_nodes

Prunes out nodes that aren't needed for inference. (deprecated)

Function Signatures

```
tf.compat.v1.graph_util.remove_training_nodes( input_graph,  
protected_nodes=None )
```

Code Examples

```
tf.compat.v1.graph_util.remove_training_nodes(  
input_graph, protected_nodes=None  
)
```

```
tf.compat.v1.graph_util.remove_training_nodes(  
input_graph, protected_nodes=None  
)
```

Documentation

Prunes out nodes that aren't needed for inference. (deprecated)

There are nodes like Identity and CheckNumerics that are only useful during training, and can be removed in graphs that will be used for nothing but inference. Here we identify and remove them, returning an equivalent graph. To be specific, CheckNumerics nodes are always removed, and

Identity nodes that aren't involved in control edges are spliced out so that their input and outputs are directly connected.

Returns
