Public API for `tf._api.v2.lite` namespace

Documentation

Public API for `tf._api.v2.lite` namespace

Modules

constants module: Public API for `tf._api.v2.lite.constants` namespace

experimental module: Public API for `tf._api.v2.lite.experimental` namespace

Classes

class Interpreter: Interpreter interface for running TensorFlow Lite models.

class OpHint: A class that helps build tflite function invocations. (deprecated)

class OpsSet: Enum class defining the sets of ops available to generate TFLite models.

class Optimize: Enum defining the optimizations to apply when generating a tflite model.

class RepresentativeDataset: Representative dataset used to optimize the model.

class TFLiteConverter: Convert a TensorFlow model into `output_format`.

class TargetSpec: Specification of target device used to optimize the model.

class TocoConverter: Convert a TensorFlow model into `output_format`.

Functions

`toco_convert(...)`: Convert a TensorFlow GraphDef to TFLite. (deprecated)
