https://www.tensorflow.org/api_docs/python/tf/compat/v1/losses/get_total_loss

Returns a tensor whose value represents the total loss.

Function Signatures

```
tf.compat.v1.losses.get_total_loss(  
    add_regularization_losses=True, name='total_loss', scope=None  
)  
tf.add_loss()
```

Code Examples

```
tf.compat.v1.losses.get_total_loss(  
    add_regularization_losses=True, name='total_loss', scope=None  
)
```

```
tf.compat.v1.losses.get_total_loss(  
    add_regularization_losses=True, name='total_loss', scope=None  
)
```

Documentation

Returns a tensor whose value represents the total loss.

In particular, this adds any losses you have added with `tf.add_loss()` to any regularization losses that have been added by regularization parameters on layers constructors e.g. `tf.layers`. Be very sure to use this if you are constructing a `loss_op` manually. Otherwise regularization arguments on `tf.layers` methods will not function.

Returns

Raises
