Computes the inverse of complementary error function.

Function Signatures

```
tf.compat.v1.math.erfcinv( x, name=None )
```

Code Examples

```
tf.compat.v1.math.erfcinv(  
x, name=None  
)
```

```
tf.compat.v1.math.erfcinv(  
x, name=None  
)
```

```
tf.math.erfcinv([0., 0.2, 1., 1.5, 2.])
```

```
tf.math.erfcinv([0., 0.2, 1., 1.5, 2.])
```

```
array([      inf,  0.9061935, -0.      , -0.4769363, -  
inf],
```

```
dtype=float32)>
```

Documentation

Computes the inverse of complementary error function.

Given x , compute the inverse complementary error function of x .

This function is the inverse of `tf.math.erfc`, and is defined on $[0, 2]$.

Returns

numpy compatibility

Equivalent to `scipy.special.erfcinv`
