https://www.tensorflow.org/api_docs/python/tf/compat/v1/math/imag

Returns the imaginary part of a complex (or real) tensor.

Function Signatures

```
tf.compat.v1.math.imag( input, name=None )
```

Code Examples

```
tf.compat.v1.math.imag(  
    input, name=None  
)
```

```
tf.compat.v1.math.imag(  
    input, name=None  
)
```

```
x = tf.constant([-2.25 + 4.75j, 3.25 + 5.75j])  
tf.math.imag(x)  # [4.75, 5.75]
```

```
x = tf.constant([-2.25 + 4.75j, 3.25 + 5.75j])  
tf.math.imag(x)  # [4.75, 5.75]
```

Documentation

Returns the imaginary part of a complex (or real) tensor.

Given a tensor input, this operation returns a tensor of type float that is the imaginary part of each element in input considered as a complex number. If input is real, a tensor of all zeros is returned.

For example:

Returns
