https://www.tensorflow.org/api_docs/python/tf/compat/v1/math/real

Returns the real part of a complex (or real) tensor.

Function Signatures

```
tf.compat.v1.math.real( input, name=None )  
x = tf.constant([-2.25 + 4.75j, 3.25 + 5.75j])  
tf.math.real(x) # [-2.25, 3.25]
```

Code Examples

```
tf.compat.v1.math.real(  
    input, name=None  
)
```

```
tf.compat.v1.math.real(  
    input, name=None  
)
```

```
x = tf.constant([-2.25 + 4.75j, 3.25 + 5.75j])  
tf.math.real(x)  # [-2.25, 3.25]
```

```
x = tf.constant([-2.25 + 4.75j, 3.25 + 5.75j])  
tf.math.real(x)  # [-2.25, 3.25]
```

Documentation

Returns the real part of a complex (or real) tensor.

Given a tensor input, this operation returns a tensor of type float that is the real part of each element in input considered as a complex number.

For example:

If input is already real, it is returned unchanged.

Returns
