https://www.tensorflow.org/api_docs/python/tf/compat/v1/math/reduce_prod

*Computes `tf.math.multiply` of elements across dimensions of a tensor.
(deprecated arguments)*

Function Signatures

```
tf.compat.v1.math.reduce_prod( input_tensor, axis=None,  
keepdims=None, name=None, reduction_indices=None,  
keep_dims=None )  
(keep_dims)
```

Code Examples

```
tf.compat.v1.math.reduce_prod(  
    input_tensor,  
    axis=None,  
    keepdims=None,  
    name=None,  
    reduction_indices=None,  
    keep_dims=None  
)
```

```
tf.compat.v1.math.reduce_prod(  
    input_tensor,  
    axis=None,  
    keepdims=None,  
    name=None,  
    reduction_indices=None,  
    keep_dims=None  
)
```

```
>>> x = tf.constant([[1., 2.], [3., 4.]])  
>>> tf.math.reduce_prod(x)  
  
>>> tf.math.reduce_prod(x, 0)  
  
>>> tf.math.reduce_prod(x, 1)
```

```
>>> x = tf.constant([[1., 2.], [3., 4.]])  
>>> tf.math.reduce_prod(x)  
  
>>> tf.math.reduce_prod(x, 0)  
  
>>> tf.math.reduce_prod(x, 1)
```

Documentation

Computes `tf.math.multiply` of elements across dimensions of a tensor.
(deprecated arguments)

This is the reduction operation for the elementwise `tf.math.multiply` op.

Reduces `input_tensor` along the dimensions given in `axis`.

Unless `keepdims` is true, the rank of the tensor is reduced by 1 for each of the entries in `axis`, which must be unique. If `keepdims` is true, the reduced dimensions are retained with length 1.

If `axis` is `None`, all dimensions are reduced, and a tensor with a single element is returned.

For example

Returns

numpy compatibility

Equivalent to `np.prod`
