https://www.tensorflow.org/api_docs/python/tf/compat/v1/metrics/mean_per_class_accuracy

Calculates the mean of the per-class accuracies.

Function Signatures

```
tf.compat.v1.metrics.mean_per_class_accuracy( labels,  
predictions, num_classes, weights=None,  
metrics_collections=None, updates_collections=None, name=None  
)
```

Code Examples

```
tf.compat.v1.metrics.mean_per_class_accuracy(  
    labels,  
    predictions,  
    num_classes,  
    weights=None,  
    metrics_collections=None,  
    updates_collections=None,  
    name=None  
)
```

```
tf.compat.v1.metrics.mean_per_class_accuracy(  
    labels,  
    predictions,  
    num_classes,  
    weights=None,  
    metrics_collections=None,  
    updates_collections=None,  
    name=None  
)
```

Documentation

Calculates the mean of the per-class accuracies.

Calculates the accuracy for each class, then takes the mean of that.

For estimation of the metric over a stream of data, the function creates an `update_op` operation that updates the accuracy of each class and returns them.

If `weights` is `None`, `weights` default to 1. Use `weights` of 0 to mask values.

Returns

`## Raises`
