https://www.tensorflow.org/api_docs/python/tf/compat/v1/nn/crelu

Computes Concatenated ReLU.

Function Signatures

```
tf.compat.v1.nn.crelu( features, name=None, axis=-1 )
```

Code Examples

```
tf.compat.v1.nn.crelu(  
    features, name=None, axis=-1  
)
```

```
tf.compat.v1.nn.crelu(  
    features, name=None, axis=-1  
)
```

Documentation

Computes Concatenated ReLU.

Concatenates a ReLU which selects only the positive part of the activation with a ReLU which selects only the negative part of the activation.

Note that as a result this non-linearity doubles the depth of the activations.
