https://www.tensorflow.org/api_docs/python/tf/compat/v1/ones_like

Creates a tensor with all elements set to 1.

Function Signatures

```
tf.compat.v1.ones_like( tensor, dtype=None, name=None,
                        optimize=True )
```

Code Examples

```
tf.compat.v1.ones_like(  
    tensor, dtype=None, name=None, optimize=True  
)
```

```
tf.compat.v1.ones_like(  
    tensor, dtype=None, name=None, optimize=True  
)
```

```
tensor = tf.constant([[1, 2, 3], [4, 5, 6]])  
tf.ones_like(tensor) # [[1, 1, 1], [1, 1, 1]]
```

```
tensor = tf.constant([[1, 2, 3], [4, 5, 6]])  
tf.ones_like(tensor) # [[1, 1, 1], [1, 1, 1]]
```

Documentation

Creates a tensor with all elements set to 1.

See also `tf.ones`.

Given a single tensor (`tensor`), this operation returns a tensor of the same type and shape as `tensor` with all elements set to 1. Optionally, you can specify a new type (`dtype`) for the returned tensor.

For example:

`## Returns`
