Public API for `tf._api.v2.ragged` namespace

Function Signatures

```
boolean_mask(...)  
constant(...)
```

Documentation

Public API for `tf._api.v2.ragged` namespace

Classes

`class RaggedTensorValue`: Represents the value of a `RaggedTensor`.

Functions

`boolean_mask(...)`: Applies a boolean mask to data without flattening the mask dimensions.

`constant(...)`: Constructs a constant `RaggedTensor` from a nested Python list.

`constant_value(...)`: Constructs a `RaggedTensorValue` from a nested Python list.

`cross(...)`: Generates feature cross from a list of tensors.

`cross_hashed(...)`: Generates hashed feature cross from a list of tensors.

`map_flat_values(...)`: Applies `op` to the `flat_values` of one or more `RaggedTensors`.

`placeholder(...)`: Creates a placeholder for a `tf.RaggedTensor` that will always be fed.

`range(...)`: Returns a `RaggedTensor` containing the specified sequences of numbers.

`row_splits_to_segment_ids(...)`: Generates the segmentation corresponding to a `RaggedTensor` `row_splits`.

`segment_ids_to_row_splits(...)`: Generates the `RaggedTensor` `row_splits` corresponding to a segmentation.

`stack(...)`: Stacks a list of rank- R tensors into one rank- $(R+1)$ `RaggedTensor`.

`stack_dynamic_partitions(...)`: Stacks dynamic partitions of a `Tensor` or `RaggedTensor`.
