Documentation

Public API for `tf._api.v2.random` namespace

Modules

experimental module: Public API for `tf._api.v2.random.experimental` namespace

Classes

class Algorithm: A random-number-generation (RNG) algorithm.

class Generator: Random-number generator.

Functions

`all_candidate_sampler(...)`: Generate the set of all classes.

`categorical(...)`: Draws samples from a categorical distribution.

`create_rng_state(...)`: Creates a RNG state from an integer or a vector.

`fixed_unigram_candidate_sampler(...)`: Samples a set of classes using the provided (fixed) base distribution.

`fold_in(...)`: Folds in data to an RNG seed to form a new RNG seed.

`gamma(...)`: Draws shape samples from each of the given Gamma distribution(s).

`get_global_generator(...)`: Retrieves the global generator.

`get_seed(...)`: Returns the local seeds an operation should use given an op-specific seed.

`learned_unigram_candidate_sampler(...)`: Samples a set of classes from a distribution learned during training.

`log_uniform_candidate_sampler(...)`: Samples a set of classes using a log-uniform (Zipfian) base distribution.

`multinomial(...)`: Draws samples from a multinomial distribution. (deprecated)

`normal(...)`: Outputs random values from a normal distribution.

`poisson(...)`: Draws shape samples from each of the given Poisson distribution(s).

`set_global_generator(...)`: Replaces the global generator with another Generator object.

`set_random_seed(...)`: Sets the graph-level random seed for the default graph.

`shuffle(...)`: Randomly shuffles a tensor along its first dimension.

`split(...)`: Splits an RNG seed into num new seeds by adding a leading axis.

`stateless_binomial(...)`: Outputs deterministic pseudorandom values from a binomial distribution.

`stateless_categorical(...)`: Draws deterministic pseudorandom samples from a categorical distribution.

`stateless_gamma(...)`: Outputs deterministic pseudorandom values from a gamma distribution.

`stateless_multinomial(...)`: Draws deterministic pseudorandom samples from a multinomial distribution. (deprecated)

`stateless_normal(...)`: Outputs deterministic pseudorandom values from a normal distribution.

`stateless_parameterized_truncated_normal(...)`: Outputs random values from a truncated normal distribution.

`stateless_poisson(...)`: Outputs deterministic pseudorandom values from a Poisson distribution.

`stateless_truncated_normal(...)`: Outputs deterministic pseudorandom values, truncated normally distributed.

`stateless_uniform(...)`: Outputs deterministic pseudorandom values from a uniform distribution.

`truncated_normal(...)`: Outputs random values from a truncated normal distribution.

`uniform(...)`: Outputs random values from a uniform distribution.

`uniform_candidate_sampler(...)`: Samples a set of classes using a uniform base distribution.
