https://www.tensorflow.org/api_docs/python/tf/compat/v1/random/experimental

Public API for tf._api.v2.random.experimental namespace

Function Signatures

```
create_rng_state(...)  
get_global_generator(...)  
index_shuffle(...)
```

Documentation

Public API for `tf._api.v2.random.experimental` namespace

Classes

`class Algorithm`: A random-number-generation (RNG) algorithm.

`class Generator`: Random-number generator.

Functions

`create_rng_state(...)`: Creates a RNG state from an integer or a vector.

`get_global_generator(...)`: Retrieves the global generator.

`index_shuffle(...)`: Outputs the position of index in a permutation of `[0, ..., max_index]`.

`set_global_generator(...)`: Replaces the global generator with another `Generator` object.

`stateless_fold_in(...)`: Folds in data to an RNG seed to form a new RNG seed.

`stateless_shuffle(...)`: Randomly and deterministically shuffles a tensor along its first dimension.

`stateless_split(...)`: Splits an RNG seed into num new seeds by adding a leading axis.
