https://www.tensorflow.org/api_docs/python/tf/compat/v1/random/stateless_multinomial

Draws deterministic pseudorandom samples from a multinomial distribution. (deprecated)

Function Signatures

```
tf.compat.v1.random.stateless_multinomial( logits,  
num_samples, seed, output_dtype=tf.dtypes.int64, name=None )  
# samples has shape [1, 5], where each value is either 0 or 1  
with equal # probability. samples =  
tf.random.stateless_categorical( tf.math.log([[0.5, 0.5]]),  
5, seed=[7, 17])
```

Code Examples

```
tf.compat.v1.random.stateless_multinomial(  
    logits,  
    num_samples,  
    seed,  
    output_dtype=tf.dtypes.int64,  
    name=None  
)
```

```
tf.compat.v1.random.stateless_multinomial(  
    logits,  
    num_samples,  
    seed,  
    output_dtype=tf.dtypes.int64,  
    name=None  
)
```

```
tf.dtypes.int64
```

```
# samples has shape [1, 5], where each value is either 0 or 1 with  
# equal  
# probability.  
samples = tf.random.stateless_categorical(  
    tf.math.log([[0.5, 0.5]]), 5, seed=[7, 17])
```

```
# samples has shape [1, 5], where each value is either 0 or 1 with  
# equal  
# probability.  
samples = tf.random.stateless_categorical(  
    tf.math.log([[0.5, 0.5]]), 5, seed=[7, 17])
```

Documentation

Draws deterministic pseudorandom samples from a multinomial distribution.
(deprecated)

This is a stateless version of `tf.random.categorical`: if run twice with the same seeds and shapes, it will produce the same pseudorandom numbers. The output is consistent across multiple runs on the same hardware (and between CPU and GPU), but may change between versions of TensorFlow or on non-CPU/GPU hardware.

Example:

`## Returns`
