

tf.compat.v1.reduce_join Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/compat/v1/reduce_join

Joins all strings into a single string, or joins along an axis.

Function Signatures

```
tf.compat.v1.reduce_join( inputs, axis=None, keep_dims=None,
separator='', name=None, reduction_indices=None,
keepdims=None )
['def', '456']]).numpy()
```

Code Examples

```
tf.compat.v1.reduce_join(
inputs,
axis=None,
keep_dims=None,
separator='',
name=None,
reduction_indices=None,
keepdims=None
)
```

```
tf.compat.v1.reduce_join(  
inputs,  
axis=None,  
keep_dims=None,  
separator='',  
name=None,  
reduction_indices=None,  
keepdims=None  
)
```

```
tf.strings.reduce_join(['abc', '123'],  
['def', '456'])).numpy()  
b'abc123def456'  
tf.strings.reduce_join(['abc', '123'],  
['def', '456']], axis=-1).numpy()  
array([b'abc123', b'def456'], dtype=object)  
tf.strings.reduce_join(['abc', '123'],  
['def', '456']],  
axis=-1,  
separator=" ").numpy()  
array([b'abc 123', b'def 456'], dtype=object)
```

```
tf.strings.reduce_join(['abc', '123'],
```

```
['def', '456'])).numpy()
```

```
b'abc123def456'
```

```
tf.strings.reduce_join(['abc', '123'],
```

```
['def', '456']], axis=-1).numpy()
```

Documentation

Joins all strings into a single string, or joins along an axis.
