---

*Creates prediction signature from given inputs and outputs.*

## Function Signatures

---

```
tf.compat.v1.saved_model.predict_signature_def( inputs,  
outputs )
```

## Code Examples

---

```
tf.compat.v1.saved_model.predict_signature_def(  
inputs, outputs  
)
```

```
tf.compat.v1.saved_model.predict_signature_def(  
inputs, outputs  
)
```

# Documentation

---

Creates prediction signature from given inputs and outputs.

`tf.compat.v1.saved_model.signature_def_utils.predict_signature_def`

## Used in the notebooks

- Migrate the SavedModel workflow

This function produces signatures intended for use with the TensorFlow Serving Predict API (`tensorflow_serving/apis/prediction_service.proto`). This API imposes no constraints on the input and output types.

## Returns

**## Raises**
