https://www.tensorflow.org/api_docs/python/tf/conv2d_backprop_input_v2

Computes the gradients of convolution with respect to the input.

Code Examples

```
tf.conv2d_backprop_input_v2(  
    input: Annotated[Any, TV_Conv2DBackpropInputV2_T],  
    filter: Annotated[Any, TV_Conv2DBackpropInputV2_T],  
    out_backprop: Annotated[Any, TV_Conv2DBackpropInputV2_T],  
    strides,  
    padding: str,  
    use_cudnn_on_gpu: bool = True,  
    explicit_paddings=[],  
    data_format: str = 'NHWC',  
    dilations=[1, 1, 1, 1],  
    name=None  
) -> Annotated[Any, TV_Conv2DBackpropInputV2_T]
```

```
tf.conv2d_backprop_input_v2(  
    input: Annotated[Any, TV_Conv2DBackpropInputV2_T],  
    filter: Annotated[Any, TV_Conv2DBackpropInputV2_T],  
    out_backprop: Annotated[Any, TV_Conv2DBackpropInputV2_T],  
    strides,  
    padding: str,  
    use_cudnn_on_gpu: bool = True,  
    explicit_paddings=[],  
    data_format: str = 'NHWC',  
    dilations=[1, 1, 1, 1],  
    name=None  
) -> Annotated[Any, TV_Conv2DBackpropInputV2_T]
```

Documentation

Computes the gradients of convolution with respect to the input.
