`tf.compat.v1.load_op_library`

Pass "library_filename" to a platform-specific mechanism for dynamically loading a library. The rules for determining the exact location of the library are platform-specific and are not documented here. When the library is loaded, ops and kernels registered in the library via the REGISTER_* macros are made available in the TensorFlow process. Note that ops with the same name as an existing op are rejected and not registered with the process.
