https://www.tensorflow.org/api_docs/python/tf/make_ndarray

Create a numpy ndarray from a tensor.

Function Signatures

```
tf.make_ndarray( tensor )  
# Tensor a has shape (2,3) a = tf.constant([[1,2,3],[4,5,6]])  
proto_tensor = tf.make_tensor_proto(a) # convert `tensor a`  
to a proto tensor tf.make_ndarray(proto_tensor) # output:  
array([[1, 2, 3], # [4, 5, 6]], dtype=int32) # output has  
shape (2,3)
```

Code Examples

```
tf.make_ndarray(  
    tensor  
)
```

```
tf.make_ndarray(  
    tensor  
)
```

```
# Tensor a has shape (2,3)  
a = tf.constant([[1,2,3],[4,5,6]])  
proto_tensor = tf.make_tensor_proto(a) # convert `tensor a` to a  
proto tensor  
tf.make_ndarray(proto_tensor) # output: array([[1, 2, 3],  
#                                     [4, 5, 6]],  
dtype=int32)  
# output has shape (2,3)
```

```
# Tensor a has shape (2,3)  
a = tf.constant([[1,2,3],[4,5,6]])  
proto_tensor = tf.make_tensor_proto(a) # convert `tensor a` to a  
proto tensor  
tf.make_ndarray(proto_tensor) # output: array([[1, 2, 3],  
#                                     [4, 5, 6]],  
dtype=int32)  
# output has shape (2,3)
```

Documentation

Create a numpy ndarray from a tensor.

more details.

`tf.compat.v1.make_ndarray`

Create a numpy ndarray with the same shape and data as the tensor.

For example:

`## Returns`

`## Raises`
