https://www.tensorflow.org/api_docs/python/tf/rank

Returns the rank of a tensor.

Function Signatures

```
tf.rank( input, name=None )
```

Code Examples

```
tf.rank(  
input, name=None  
)
```

```
tf.rank(  
input, name=None  
)
```

```
# shape of tensor 't' is [2, 2, 3]  
t = tf.constant([[[1, 1, 1], [2, 2, 2]], [[3, 3, 3], [4, 4, 4]]])  
tf.rank(t)  # 3
```

```
# shape of tensor 't' is [2, 2, 3]  
t = tf.constant([[[1, 1, 1], [2, 2, 2]], [[3, 3, 3], [4, 4, 4]]])  
tf.rank(t)  # 3
```

Documentation

Returns the rank of a tensor.

`tf.compat.v1.rank`

Used in the notebooks

- Introduction to Tensors

See also `tf.shape`.

Returns a 0-D int32 Tensor representing the rank of input.

For example:

`## Returns`

numpy compatibility

Equivalent to `np.ndim`
