https://www.tensorflow.org/api_docs/python/tf/required_space_to_batch_paddings

Calculate padding required to make block_shape divide input_shape.

Function Signatures

```
tf.required_space_to_batch_paddings( input_shape,  
block_shape, base_paddings=None, name=None )
```

Code Examples

```
tf.required_space_to_batch_paddings(  
input_shape, block_shape, base_paddings=None, name=None  
)
```

```
tf.required_space_to_batch_paddings(  
input_shape, block_shape, base_paddings=None, name=None  
)
```

Documentation

Calculate padding required to make `block_shape` divide `input_shape`.

`tf.compat.v1.required_space_to_batch_paddings`

This function can be used to calculate a suitable `paddings` argument for use with `space_to_batch_nd` and `batch_to_space_nd`.

Returns

`paddings` and `crops` are `int32` Tensors of rank 2 and shape `[N, 2]`

`crops[i, 0] = 0`

`crops[i, 1] = paddings[i, 1] - base_paddings[i, 1]`

Raises: `ValueError` if called with incompatible shapes.
