

tf.shape_n Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/shape_n

Returns shape of a list of tensors.

Function Signatures

```
tf.shape_n( input, out_type=tf.dtypes.int32, name=None )
```

Code Examples

```
tf.shape_n(  
    input,  
    out_type=tf.dtypes.int32,  
    name=None  
)
```

```
tf.shape_n(  
    input,  
    out_type=tf.dtypes.int32,  
    name=None  
)
```

```
tf.dtypes.int32
```

```
>>> a = tf.ones([1, 2])  
>>> b = tf.ones([2, 3])  
>>> c = tf.ones([3, 4])  
>>> tf.shape_n([a, b, c])  
[,  
,  
]
```

```
>>> a = tf.ones([1, 2])  
>>> b = tf.ones([2, 3])  
>>> c = tf.ones([3, 4])  
>>> tf.shape_n([a, b, c])  
[,  
,  
]
```

Documentation

Returns shape of a list of tensors.

`tf.compat.v1.shape_n`

Given a list of tensors, `tf.shape_n` is much faster than applying `tf.shape` to each tensor individually.

Returns
