

tf.zeros Stay organized with collections Save and categorize content based on your preferences.

https://www.tensorflow.org/api_docs/python/tf/zeros

Creates a tensor with all elements set to zero.

Function Signatures

```
tf.zeros( shape, dtype=tf.dtypes.float32, name=None,  
layout=None )
```

Code Examples

```
tf.zeros(  
shape,  
dtype=tf.dtypes.float32,  
name=None,  
layout=None  
)
```

```
tf.zeros(  
shape,  
dtype=tf.dtypes.float32,  
name=None,  
layout=None  
)
```

```
tf.dtypes.float32
```

```
tf.zeros([3, 4], tf.int32)
```

```
tf.zeros([3, 4], tf.int32)
```

```
array([[0, 0, 0, 0],
```

```
[0, 0, 0, 0],
```

Documentation

Creates a tensor with all elements set to zero.

Migration guide for
more details.

`tf.compat.v1.zeros`

Used in the notebooks

- Introduction to modules, layers, and models
 - Multilayer perceptrons for digit recognition with Core APIs
 - Better performance with the `tf.data` API
 - Training checkpoints
 - Optimizers with Core APIs
 - Custom layers
 - Learned data compression
 - Using DTensors with Keras
 - Integrated gradients
 - Multilevel Modeling Primer in TensorFlow Probability

See also `tf.zeros_like`, `tf.ones`, `tf.fill`, `tf.eye`.

This operation returns a tensor of type `dtype` with shape `shape` and all elements set to zero.

Returns
