

set_multithreading_enabled#

https://pytorch.org/docs/stable/generated/torch.autograd.grad_mode.set_multithreading_enabled.html

Description:

Context-manager that sets multithreaded backwards on or off. `set_multithreading_enabled` will enable or disable multithreaded backwards based on its argument `mode`. It can be used as a context-manager or as a function. This context manager is thread local; it will not affect computation in other threads. `mode` (bool) – Flag whether to enable multithreaded backwards (True), or disable (False).

Function Signature

```
class  
torch.autograd.grad_mode.set_multithreading_enabled(mode)  
[source]#
```

Parameters

```
clone()[source]#
```

Return type

Returns:

`set_multithreading_enabled`

Notes & Warnings

NOTE

Note This API does not apply to forward-mode AD.

Detailed Documentation

Documentation

Context-manager that sets multithreaded backwards on or off.

`set_multithreading_enabled` will enable or disable multithreaded backwards based on its argument mode. It can be used as a context-manager or as a function.

This context manager is thread local; it will not affect computation in other threads.

mode (bool) – Flag whether to enable multithreaded backwards (True), or disable (False).

This API does not apply to forward-mode AD.
