

torch.cuda.stream#

<https://pytorch.org/docs/stable/generated/torch.cuda.stream.html>

Description:

Wrap around the Context-manager StreamContext that selects a given stream. stream (Stream) – selected stream. This manager is a no-op if it's None. In eager mode stream is of type Stream class while in JIT it is an object of the custom class torch.classes.cuda.Stream.

Function Signature

```
torch.cuda.stream(stream)[source]#
```

Parameters

Return type

Returns:

StreamContext

Notes & Warnings

NOTE

Note In eager mode stream is of type `Stream` class while in JIT it is an object of the custom class `torch.classes.cuda.Stream`.

Detailed Documentation

Documentation

Wrap around the Context-manager `StreamContext` that selects a given stream.

`stream (Stream)` – selected stream. This manager is a no-op if it's `None`.

In eager mode stream is of type `Stream` class while in JIT it is an object of the custom class `torch.classes.cuda.Stream`.
