

StreamContext#

<https://pytorch.org/docs/stable/generated/torch.cuda.StreamContext.html#torch>

Description:

Context-manager that selects a given stream. All CUDA kernels queued within its context will be enqueued on a selected stream. Stream (Stream) – selected stream. This manager is a no-op if it's None. Streams are per-device.

Function Signature

```
class torch.cuda.StreamContext(stream)[source]#
```

Parameters

Notes & Warnings

NOTE Note Streams are per-device.

Detailed Documentation

Documentation

Context-manager that selects a given stream.

All CUDA kernels queued within its context will be enqueued on a selected stream.

Stream (Stream) – selected stream. This manager is a no-op if it's None.

Streams are per-device.

Context-manager that selects a given stream.

All CUDA kernels queued within its context will be enqueued on a selected stream.

Stream (Stream) – selected stream. This manager is a no-op if it's None.

Streams are per-device.
