

torch.cuda.comm.broadcast#

<https://pytorch.org/docs/stable/generated/torch.cuda.comm.broadcast.html>

Description:

Broadcasts a tensor to specified GPU devices. `tensor` (Tensor) – tensor to broadcast. Can be on CPU or GPU. `devices` (Iterable[torch.device, str or int], optional) – an iterable of GPU devices, among which to broadcast. `out` (Sequence[Tensor], optional, keyword-only) – the GPU tensors to store output results.

Function Signature

```
torch.cuda.comm.broadcast(tensor, devices=None, *, out=None)
[source]#
```

Parameters

Returns

If `devices` is specified,

If `out` is specified,

Returns:

If devices is specified, a tuple containing copies of tensor, placed on devices. If out is specified, a tuple containing out tensors, each containing a copy of tensor.

Notes & Warnings

NOTE

Note Exactly one of devices and out must be specified.

Detailed Documentation

Documentation

Broadcasts a tensor to specified GPU devices.

tensor (Tensor) – tensor to broadcast. Can be on CPU or GPU.

devices (Iterable[torch.device, str or int], optional) – an iterable of GPU devices, among which to broadcast.

out (Sequence[Tensor], optional, keyword-only) – the GPU tensors to store output results.

Exactly one of devices and out must be specified.

a tuple containing copies of tensor, placed on devices.

a tuple containing out tensors, each containing a copy of tensor.
