

torch.cuda.get_device_capability#

[https://pytorch.org/docs/stable/generated/torch.cuda.get_device_capability.h](https://pytorch.org/docs/stable/generated/torch.cuda.get_device_capability.html)

Description:

Get the cuda capability of a device. device (torch.device or int or str, optional) – device for which to return the device capability. This function is a no-op if this argument is a negative integer. It uses the current device, given by `current_device()`, if device is None (default). the major and minor cuda capability of the device

Function Signature

```
torch.cuda.get_device_capability(device=None)[source]#
```

Parameters

Returns

Return type

Returns:

tuple(int, int)

Detailed Documentation

Documentation

Get the cuda capability of a device.

device (torch.device or int or str, optional) – device for which to return the device capability. This function is a no-op if this argument is a negative integer. It uses the current device, given by `current_device()`, if device is None (default).

the major and minor cuda capability of the device

Get the cuda capability of a device.

device (torch.device or int or str, optional) – device for which to return the device capability. This function is a no-op if this argument is a negative integer. It uses the current device, given by `current_device()`, if device is None (default).

the major and minor cuda capability of the device
