

torch.cuda.get_device_name#

https://pytorch.org/docs/stable/generated/torch.cuda.get_device_name.html

Description:

Get the name of a device. device (torch.device or int or str, optional) – device for which to return the name. This function is a no-op if this argument is a negative integer. It uses the current device, given by current_device(), if device is None (default). the name of the device

Function Signature

```
torch.cuda.get_device_name(device=None)[source]#
```

Parameters

Returns

Return type

Returns:

str

Detailed Documentation

Documentation

Get the name of a device.

device (torch.device or int or str, optional) – device for which to return the name. This function is a no-op if this argument is a negative integer. It uses the current device, given by `current_device()`, if device is None (default).

the name of the device

Get the name of a device.

device (torch.device or int or str, optional) – device for which to return the name. This function is a no-op if this argument is a negative integer. It uses the current device, given by `current_device()`, if device is None (default).

the name of the device
