

torch.cuda.memory.list_gpu_processes#

https://pytorch.org/docs/stable/generated/torch.cuda.memory.list_gpu_processes.html

Description:

Return a human-readable printout of the running processes and their GPU memory use for a given device. This can be useful to display periodically during training, or when handling out-of-memory exceptions.

device (torch.device or int, optional) – selected device. Returns printout for the current device, given by `current_device()`, if device is `None` (default).

Function Signature

```
torch.cuda.memory.list_gpu_processes(device=None)[source]#
```

Parameters

Return type

Returns:

str

Detailed Documentation

Documentation

Return a human-readable printout of the running processes and their GPU memory use for a given device.

This can be useful to display periodically during training, or when handling out-of-memory exceptions.

device (torch.device or int, optional) – selected device. Returns printout for the current device, given by `current_device()`, if device is None (default).

Return a human-readable printout of the running processes and their GPU memory use for a given device.

This can be useful to display periodically during training, or when handling out-of-memory exceptions.

device (torch.device or int, optional) – selected device. Returns printout for the current device, given by `current_device()`, if device is None (default).
