

torch.cuda.memory.memory_summary#

[https://pytorch.org/docs/stable/generated/torch.cuda.memory.memory_summary.h](https://pytorch.org/docs/stable/generated/torch.cuda.memory.memory_summary.html)

Description:

Return a human-readable printout of the current memory allocator statistics for a given device. This can be useful to display periodically during training, or when handling out-of-memory exceptions. `device` (`torch.device` or `int`, optional) – selected device. Returns printout for the current device, given by `current_device()`, if `device` is `None` (default). `abbreviated` (`bool`, optional) – whether to return an abbreviated summary (default: `False`).

Function Signature

```
torch.cuda.memory.memory_summary(device=None,  
abbreviated=False)[source]#
```

Parameters

Return type

Returns:

str

Notes & Warnings

NOTE

Note See Memory management for more details about GPU memory management.

Detailed Documentation

Documentation

Return a human-readable printout of the current memory allocator statistics for a given device.

This can be useful to display periodically during training, or when handling out-of-memory exceptions.

device (torch.device or int, optional) – selected device. Returns printout for the current device, given by `current_device()`, if device is None (default).

abbreviated (bool, optional) – whether to return an abbreviated summary (default: False).

See Memory management for more details about GPU memory management.
