

torch.cuda.synchronize#

<https://pytorch.org/docs/stable/generated/torch.cuda.synchronize.html>

Description:

Wait for all kernels in all streams on a CUDA device to complete. device (torch.device or int, optional) – device for which to synchronize. It uses the current device, given by `current_device()`, if device is None (default).

Function Signature

```
torch.cuda.synchronize(device=None)[source]#
```

Parameters

Detailed Documentation

Documentation

Wait for all kernels in all streams on a CUDA device to complete.

device (torch.device or int, optional) – device for which to synchronize. It uses the current device, given by `current_device()`, if device is None (default).

Wait for all kernels in all streams on a CUDA device to complete.

device (torch.device or int, optional) – device for which to synchronize. It uses the current device, given by `current_device()`, if device is None (default).
