

ScriptFunction#

<https://pytorch.org/docs/stable/generated/torch.jit.ScriptFunction.html>

Description:

Functionally equivalent to a ScriptModule, but represents a single function and does not have any attributes or Parameters.

Function Signature

```
class torch.jit.ScriptFunction#  
  
get_debug_state(self: torch._C.ScriptFunction) →  
torch._C.GraphExecutorState#  
  
save(self: torch._C.ScriptFunction, filename: str,  
_extra_files: collections.abc.Mapping[str, str] = {}) →  
None#  
  
save_to_buffer(self: torch._C.ScriptFunction, _extra_files:  
collections.abc.Mapping[str, str] = {}) → bytes#
```

Detailed Documentation

Documentation

Functionally equivalent to a `ScriptModule`, but represents a single function and does not have any attributes or Parameters.

Functionally equivalent to a `ScriptModule`, but represents a single function and does not have any attributes or Parameters.
