

strict_fusion#

https://pytorch.org/docs/stable/generated/torch.jit.strict_fusion.html

Description:

Give errors if not all nodes have been fused in inference, or symbolically differentiated in training. Example: Forcing fusion of additions.

Function Signature

```
class torch.jit.strict_fusion[source]#
```

Code Examples

```
@torch.jit.script
def foo(x):
    with torch.jit.strict_fusion():
        return x + x + x
```

Detailed Documentation

Documentation

Give errors if not all nodes have been fused in inference, or symbolically differentiated in training.

Example: Forcing fusion of additions.

Give errors if not all nodes have been fused in inference, or symbolically differentiated in training.
