

ELU#

<https://pytorch.org/docs/stable/generated/torch.nn.ELU.html>

Description:

Applies the Exponential Linear Unit (ELU) function, element-wise. Method described in the paper: Fast and Accurate Deep Network Learning by Exponential Linear Units (ELUs). α (float) – the α value for the ELU formulation. Default: 1.0 inplace (bool) – can optionally do the operation in-place. Default: False

Function Signature

```
class torch.nn.ELU(alpha=1.0, inplace=False)[source]#
```

Parameters

Shape:

```
extra_repr()[source]#
```

Return type

Returns:

Tensor

Code Examples

```
>>> m = nn.ELU()  
>>> input = torch.randn(2)  
>>> output = m(input)
```

Detailed Documentation

Documentation

Applies the Exponential Linear Unit (ELU) function, element-wise.

Method described in the paper: Fast and Accurate Deep Network Learning by Exponential Linear Units (ELUs).

alpha (float) – the α value for the ELU formulation. Default: 1.0

inplace (bool) – can optionally do the operation in-place. Default: False

Input: $(*)^{(*)}^{(*)}$, where $***$ means any number of dimensions.

Output: $(*)^{(*)}^{(*)}$, same shape as the input.

Return the extra representation of the module.

Runs the forward pass.
